

How to Download BCI433 Lab Documents from the ZEUS Server

Except for lab 1, which has been posted on Blackboard, all labs will be available on the ZEUS server only, and you need to download (or copy) lab documents from the ZEUS server to start your labs. All BCI433 lab documents are on ZEUS server's IFS with the PATH of "Root file system /BCI433". There are 2 ways/tools for you to download (or copy) these lab documents. Here are detailed instructions:

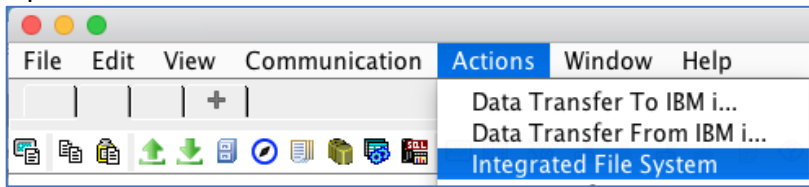

1. The **first** way is to use RDi. If you have installed IBM RDi 9.6 on your computer, go to Remote Systems view, then copy lab documents from the path under **IFS Files** and paste to **Drives** or **My Home** under the **Local** folder (see the screenshot). At end, use Windows' File Explorer or MacOS's Finder to locate and open the lab documents on your computer.

Note: Please download each lab at the beginning of the week in which we start lecturing or doing the lab. This will ensure you get the latest versions of lab documents.

2. Faster way:

Open ACS->Actions menu->IFS

Change Directory to BCI433. Open and download current week's lab.
